

Help your child become engaged with STEM

Free open twilight event for educators, caregivers, young families – all ages welcome!

We have an exciting opportunity to nourish inquisitive minds with some interactive displays and jargon-free presentations on STEM subjects such as, fusion energy, physics and engineering.

Encouraging curiosity with STEM in young children today will not only help develop interdisciplinary critical thinking now but will foster the analytical and logical skills that will be integral for your child's future success. Help them to understand why building clean energy is crucial for the sustainability of our planet.

During this drop-in event, there will be a twenty-minute talk on the hour at 4pm, 5pm and 6pm.

Come and hear updates on the STEP project and what a career in STEM and UKAEA looks like. Interactive displays for your child to engage with include a plasma ball, colouring station, robotic arms, MAST-U game, robot dogs and a model tokamak – *a machine used in the creation of fusion plasmas.*

UKAEA staff including scientists and engineers will be on hand to answer your questions.

Activities brought on the day will be suitable for all ages from Early Years through to adults.

16 January 2025 • 4-7pm • The Fusion Energy Café, The Bridge Skills Hub
